

Using Python with Excel

with George Mount

Downloading Python

The only software needed for this course is a free download of **Anaconda Individual** which can be downloaded at <https://www.anaconda.com>. Follow all of the recommended steps to download on your computer.

Accessing Jupyter Notebooks

You will be using Jupyter Notebooks to run the files in this course. This application comes installed as part of your Anaconda download. For ease of accessing these files, I suggest leaving them in the **Downloads** folder of your computer as you take the course.

Make sure you have decompressed the demo folder to run it in Jupyter.

To access Jupyter on Mac:

1. Open a Terminal window from your Launchpad
2. Type **jupyter notebook**
3. Press Enter

To access Jupyter on Windows:

1. Press the Windows key on your keyboard and search for "Jupyter Notebook"
2. Press Enter

Once the Jupyter Notebook file explorer is open, navigate to the folder containing your demo files.
